

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3 years building production agentic AI systems and full-stack platforms at scale. Designed MCP-based agentic architecture reducing 3–5 day manual workflows to 5-second automated decisions. Led a 12-service microservices migration across 20+ engineers with 45%+ infra cost reduction. Strong foundation in LLM integration, distributed systems, and cloud-native engineering.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems
University of Mumbai

Bachelor of Engineering in Computer Engineering

Boston, MA

Sept 2023 – May 2025

Mumbai, India

Aug 2018 – Jun 2021

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, Go, C++, SQL, Shell

AI & Agentic: Claude API, MCP, RAG, Agentic Workflows, Pinecone, Ollama, Llama 3, Prompt Engineering

Frameworks: React, Next.js, Node.js, Django, FastAPI, Spring Boot, GraphQL, gRPC

Cloud & Infra: AWS (EKS, Lambda, S3, SQS), GCP, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Helm

Data & Observability: Kafka, PostgreSQL, MongoDB, Redis, Elasticsearch, Prometheus, New Relic, Jest, Cypress, K6

EXPERIENCE

Full-Stack Developer

Aug 2025 – Present

KeelWorks Foundation

Boston, MA

- Built GenAI-powered workflow automation using Claude API, enabling contextual recommendations and automated task summarization, reduced development effort by 40% for a distributed volunteer team
- Own end-to-end development of KeelCompass workforce engagement platform; deliver React/TypeScript UI and Node.js/PostgreSQL microservices partnering with PM and design
- Automated CI/CD pipeline with GitHub Actions on AWS EKS, eliminating manual release steps and unblocking same-day deploys

Software Engineer

May 2023 – Sep. 2023

Freelancing (Dabadu.ai)

Remote

- Stabilized production services on AWS-hosted automotive dealership CRM; integrated third-party APIs into backend workflows with Node.js and PostgreSQL, adding retry logic and structured logging
- Refactored legacy JavaScript to TypeScript and introduced SonarCloud quality gates in CI, reducing prod bugs 20%

Software Engineer

Jun. 2021 – May 2023

NeoSOFT Technologies

Mumbai, India

- Built open-source boilerplates — mf-shell (Webpack Module Federation enabling micro-frontend composition) and Console (multi-tenant admin panel with RBAC); adopted as org-wide scaffolding standards by 15+ internal teams
- Audited 500K+ user real estate CRM (400–500ms avg, 2s spikes); proposed and led ground-up rebuild — designed architecture, coordinated 20+ engineers over 6 months; migrated 12 services with zero downtime, achieving 7x faster inter-service calls via gRPC and 45%+ infra cost reduction through AWS rightsizing
- Engineered Homepage Builder CMS and multi-tenant CRM for Nesto using React, Node.js, and AWS Lambda; enabled marketing to independently update pages and promotions, eliminating a recurring engineering bottleneck
- Implemented CI/CD with mandatory tests and New Relic APM dual dashboards (engineering metrics + stakeholder health view), cutting MTTR from 25 to 15 minutes
- Designed GraphQL/REST APIs with PostgreSQL and Redis caching serving 500K+ users, cutting response times 70%; established Jest/Cypress automation reaching 85% test coverage
- Mentored 8 junior developers through code reviews and initiated bi-weekly knowledge sharing seminars

RECENT PROJECTS

Healthcare Prior Authorization AI | *Python, FastAPI, Claude API, FHIR R4, MCP, Pinecone, Streamlit*

- Designed MCP-based agentic architecture combining patient clinical data with insurance policy documents for context-aware LLM reasoning — system outputs confidence scores with full audit trails enabling reviewers to prioritize high-value claims
- Built clinical NLP pipeline mapping unstructured medical notes to FHIR R4 resources with 95%+ extraction accuracy; replaced 3–5 day manual insurance reviews with automated decisions in 5–10 seconds

CVE Intelligence System | *Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio*

- Built distributed microservices for real-time CVE ingestion using Kafka streaming; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in plain English instead of manual NVD searches
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline
