

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3+ years shipping distributed systems. Self-initiated and led a ground-up 12-service migration on a live CRM, coordinating 20+ engineers, 7x faster inter-service calls, 45% infra cost reduction. Production experience with Kafka, Go, Python, and Node on AWS EKS. Comfortable owning systems on-call and using AI tooling to move faster.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

SKILLS

Languages: Python, Java, TypeScript, JavaScript, Go, SQL, Bash

Backend & APIs: Node.js, FastAPI, Spring Boot, REST, GraphQL, gRPC, Elasticsearch

Async & Data: Kafka (partitions, exactly-once, Bitnami), SQS, PostgreSQL, DynamoDB, Redis, MongoDB

Cloud & Infra: AWS (EKS, ECS, Lambda, S3), Docker, Kubernetes, Terraform, Packer, Helm, Istio

CI/CD & AI: GitHub Actions, Jenkins, Prometheus, Grafana, New Relic, Claude, RAG, Pinecone, MCP, Ollama

EXPERIENCE

Full-Stack Developer

KeelWorks Foundation

Aug 2025 – Present

Boston, MA

- Built backend services in Node.js and PostgreSQL for KeelCompass workforce engagement platform; designed REST APIs and async processing patterns supporting a distributed engineering team
- Automated end-to-end deployment pipeline with GitHub Actions on AWS EKS, eliminating manual release steps and unblocking same-day deploys for the engineering team
- Use Claude Code and AI-assisted coding tools for test generation, scaffolding, and refactoring; removed hours of manual boilerplate per feature and accelerated test coverage on new modules

Software Engineer

NeoSOFT Technologies

Jun 2021 – May 2023

Mumbai, India

- Proposed and led the rebuild of real estate CRM (Spring Boot monolith, 500ms avg latency); built gRPC + Kafka POC, designed target architecture, and coordinated 20+ engineers across teams over a 6-month phased migration
- Migrated 12 services with zero downtime, 7x faster inter-service calls via gRPC, and 45%+ infra cost reduction through AWS rightsizing – new system sustained sub-100ms p95 with no production incidents
- Implemented **Kafka** for async workflows (notifications, emails, background jobs) able to handle 1B+ messages with exactly-once semantics and DLQ patterns; designed **gRPC** services with Protobuf for low-latency internal requests
- Designed PostgreSQL schemas with indexing and cursor-based pagination; added Redis caching for hot paths, cutting API response times by 70% under peak traffic
- Built CI/CD pipelines with Jenkins and GitHub Actions; added Prometheus, Grafana, and New Relic observability with SLI/SLO dashboards, reducing MTTR from 25 to 15 minutes
- Built open-source boilerplates – mf-shell (Webpack Module Federation) and Console (multi-tenant admin with RBAC); adopted as org-wide scaffolding by 15+ internal teams
- Mentored 8 junior developers through code reviews and system design discussions; participated in on-call rotation and led blameless postmortems on production incidents

Software Engineer

Freelancing (Dabadu.ai)

May 2023 – Sep. 2023

Remote

- Stabilized backend services for production automotive dealership CRM; added structured logging, retry logic, and circuit breakers around third-party API integrations, restoring reliable deployments
- Established SonarCloud quality gates and Cypress test automation in CI pipeline, reducing production bugs by 20%

RECENT PROJECTS

CVE Intelligence System | *Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio*

- Built distributed microservices in Go for real-time CVE ingestion using Kafka streaming with schema validation and dead-letter queue handling; designed PostgreSQL schemas with indexing for high-throughput writes
- Developed RAG pipeline with Pinecone vector DB and Llama 3 enabling engineers to query vulnerabilities in natural language; deployed on AWS EKS with Terraform IaC, Istio service mesh, and Prometheus/Grafana monitoring

Multi-Tenant CRM Backend (Wasalt/Nesto) | *Node.js, Spring Boot, PostgreSQL, Kafka, Redis, gRPC, Kubernetes*

- Architected multi-tenant backend supporting 50+ roles with tenant isolation via row-level security; designed PostgreSQL schemas and Redis caching layer achieving sub-100ms responses on hot paths
- Implemented Kafka event streaming for cross-tenant notifications and gRPC for low-latency inter-service calls; integrated AWS Lambda for serverless workflows

Healthcare Prior Authorization AI | *Python, FastAPI, Claude API, FHIR R4, MCP, Pinecone*

- Engineered AI system replacing 3–5 day manual insurance reviews with automated decisions in 5–10 seconds; built clinical NLP pipeline mapping unstructured notes to FHIR R4 with 95%+ extraction accuracy on test dataset
