Summary

Full-stack Software Engineer with 3+ years building production systems with Java/Spring Boot microservices and React/TypeScript frontends for platforms serving 750+ users. Hands-on across the full SDLC, code reviews, Cypress automated testing, Jenkins CI/CD, and Docker/AWS deployments. Strong foundation in distributed systems, AI/LLM, object-oriented design, and on-call operations.

Skills

Frontend	React, Next.js, TypeScript, JavaScript(ES6+), Redux, Material-UI, Tailwind, HTML, CSS, Webpack, Storybook
Backend & APIs	Java, Spring Boot, Hibernate, SQL, Node.js, Python, FastAPI, REST, Go, GraphQL, gRPC, WebSockets
DBs and Data	PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, Redis, Elasticsearch, Kafka
Cloud & Infra	AWS, GCP, Docker, Kubernetes, Terraform, Helm, Istio, Jenkins, GitHub Actions, Prometheus, Grafana
AI & Testing	Claude Code, Claude, MCP, RAG, Pinecone, Llama 3, Ollama, JUnit, Jest, Cypress, SonarCloud, Selenium

Professional Experience

Full-Stack Developer, KeelWorks Foundation — Remote

Aug 2025 – Present

- Own end-to-end development of **KeelCompass**, an internal workforce engagement forum; deliver **React/TypeScript** UI and **Node.js** microservices on PostgreSQL, partnering with product and design to ship features for a distributed team.
- Built CI/CD pipeline with **GitHub Actions** on **AWS EKS** using Docker and Terraform, eliminating manual release steps and enabling same-day production deploys.
- Delivered reusable **React component library** with coding standards adopted across the team, reducing duplicated patterns and onboarding time for new contributors.
- Optimized frontend performance with code splitting, lazy loading, and **PWA** features, reducing page load times by **30%**; conducted code reviews focused on code health, test coverage, and adherence to best practices.

Software Engineer, Freelance (Dabadu.ai) — Remote

May 2023 – Sept 2023

- Stabilized production services for an automotive dealership CRM (XRM) built with **React/Node.js**; diagnosed and resolved defects across **Socket.IO** real-time chat, **Twilio** integrations, and S3 media upload modules.
- Refactored legacy JavaScript codebase to **TypeScript** with strict type checking; introduced **SonarCloud** quality gates and **Cypress** E2E testing in the CI pipeline, cutting production bugs 20%.

Software Engineer, NeoSOFT Technologies — Mumbai, India

Jun 2021 – May 2023

- Selected for the **Center of Excellence** (top 5 performers) building org-wide tooling; designed and shipped two open-source boilerplates — **mf-shell** (Webpack Module Federation for micro-frontends) and **Console** (multi-tenant admin panel with RBAC and Keycloak SSO) — adopted as scaffolding standards across 15+ internal teams.
- Audited a 500K+ user real estate CRM with severe latency issues; designed and led ground-up migration from **Spring Boot** monolith to a 12-service microservices platform, coordinating 20+ engineers over 6 months with **zero production downtime**.
- Designed **gRPC** with Protocol Buffers for inter-service communication achieving **7x throughput**; introduced **Kafka** for async workflows (notifications, batch ingestion, event-driven flows), reducing AWS infra cost **45%+** via right-sizing.
- Designed and maintained **concurrent Spring Boot** services with **Hibernate**, async APIs, and **JUnit** tests; optimized PostgreSQL schemas with indexing, query tuning, transaction management, and Liquibase migrations achieving sub-100ms response times.
- Owned full-stack delivery for Pedgog ed-tech platform (Next.js); architected Django analytics engine and built CI/CD with **New Relic APM** dual dashboards (engineering metrics + stakeholder health view), cutting MTTR from 25 to 15 minutes.
- Built **React/TypeScript** user interfaces with reusable component libraries published as internal npm packages; converted legacy applications to **PWAs** with SSR/SSG, reducing page load times by **40%** and achieving **85% test coverage** with **Jest** and **Cypress**.

Projects

Healthcare Prior Authorization AI — Agentic Data Pipeline

Python, FastAPI, Claude API, MCP, FHIR R4, Pinecone

- Designed a **Model Context Protocol (MCP)** architecture for context-aware LLM reasoning over heterogeneous data sources (clinical notes, structured FHIR, insurance policy); replaced 3–5 day manual reviews with automated decisions in 5–10 seconds.
- Built clinical NLP pipeline mapping unstructured medical notes to FHIR R4 resources with **95%+ extraction accuracy**; system outputs confidence scores with full audit trails, enabling reviewers to prioritize high-value cases.

CVE Intelligence System — Streaming Pipeline + RAG

Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio

- Built distributed microservices in **Go** for real-time CVE ingestion via **Kafka** streaming; developed **RAG** retrieval layer over Pinecone with Llama 3 enabling natural-language queries against ingested vulnerability records.
- Deployed on **AWS EKS** with **Terraform** IaC and **Istio** service mesh for secure inter-service communication; instrumented **Prometheus/Grafana** monitoring with automated alerting and **Jenkins** CI/CD pipeline.

Education & Certifications

Master of Science in Software Engineering Systems — Northeastern University, Boston, MA

Sept 2023 – May 2025

Relevant Coursework: Distributed Systems, Object-Oriented Design, Advanced Cloud Computing, Algorithms

Bachelor of Engineering in Computer Engineering — University of Mumbai, Mumbai, India

Aug 2018 – Jun 2021

Certifications: Oracle Certified Java Enterprise Applications Developer | Scrum Fundamentals (SCRUMStudy) | Foundational AI
