Summary

Software Engineer with 3+ years architecting and operating cloud-native infrastructure supporting high-stakes product development environments. Built and optimized end-to-end CI/CD pipelines, Terraform-managed Kubernetes clusters, and observability stacks that reduced MTTR from 25 to 15 minutes and deferred 30K in infra spend.

Skills

Languages	Python, Bash/Shell, PowerShell , Go, JavaScript, TypeScript, Java, Groovy, SQL
Cloud & Infra	AWS (EKS, EC2, S3, RDS, IAM, CloudWatch, ELB), GCP (GKE, Cloud SQL, Pub/Sub), Terraform, Ansible
Containers	Docker, Kubernetes (EKS/GKE), Helm, Istio Service Mesh, Container Security, Auto-scaling
CI/CD	Jenkins (Pipeline-as-Code, JCasC), GitHub Actions, GitLab CI, Packer, ArgoCD, Blue-Green/Canary Deploys
Observability	Prometheus, Grafana, New Relic, OpenTelemetry, ELK Stack, CloudWatch, SLOs/SLIs, Alerting
Reliability	Incident Response, Root Cause Analysis, Disaster Recovery , Capacity Planning, Load Testing, Chaos Engineering

Professional Experience

Full-Stack Developer, KeelWorks — Boston, MA Aug 2025 – Present

- Own infrastructure for workforce engagement platform: **EKS cluster**, **Terraform** modules, and **GitHub Actions** CI/CD.
- Set up **Prometheus/Grafana** dashboards tracking API latency, error rates, and pod health across environments.

Software Engineer, Freelancing (Dabadu.ai) — Remote May 2023 – Sept 2023

- Wrote **runbooks** for common incidents (API timeouts, DB connection leaks) used by on-call rotation; contributed to **business continuity** planning for live dealership operations.
- Integrated **SonarCloud security scanning** into Bitbucket pipelines; enforced quality gates that reduced post-deploy vulnerabilities and failures by **20%**.

Software Engineer, NeoSOFT Technologies — Mumbai, India Jun 2021 – May 2023

- Built and maintained **Terraform** modules for AWS/GCP infra (EKS, RDS, S3, IAM); adopted as templates across 3 teams, reducing provisioning time and enforcing consistent infrastructure standards.
- Cut deploy time from **2 hours to 12 minutes** by migrating manual releases to **Jenkins pipelines** with blue-green rollouts, enabling multiple daily releases and same-day bug fixes.
- Automated operational tasks with **Python, Bash, and PowerShell scripts** for log rotation, backups, and health checks across **50+ hosts**; reduced on-call pages by **40%**.
- Ran weekly **K6 load tests** in staging; caught 3 race conditions before production that would have caused outages.
- Configured **HPA and cluster autoscaler** on EKS; handled 3x traffic spikes during product launches without manual intervention.
- Set up **Prometheus/Grafana** dashboards with SLO/SLI tracking for API latency and error rates; added alerting that cut **MTTR from 25 to 15 minutes**.
- Right-sized EKS clusters using **New Relic** performance metrics; deferred **\$30K** in hardware spend by identifying over-provisioned pods through capacity planning and performance management.
- Configured **AWS Secrets Manager** and least-privilege **IAM roles**; passed security compliance audit with **zero critical findings**.
- Led **blameless postmortems** after incidents; documented root causes, action items, and **disaster recovery procedures** that prevented repeat failures and strengthened business continuity posture.

Projects

CVE Intelligence System — Cloud-Native Infrastructure Go, Terraform, AWS EKS, Kubernetes, Helm, Istio, Prometheus

- Deployed distributed microservices on **AWS EKS** using **Terraform** for IaC and **Helm** charts for K8s resources.
- Configured **Istio service mesh** for secure inter-service communication with **mTLS encryption**; bootstrapped **Jenkins** with **Packer/JCasC** for reproducible CI environments.
- Implemented **Prometheus and Grafana** for real-time observability, alerting, and **SLO dashboards**.

Wasalt — Real Estate Platform Infrastructure Kubernetes, Terraform, Kafka, Redis, Jenkins, Grafana

- Deployed multi-tenant microservices on **Kubernetes** with **Terraform** IaC and **Helm** charts; right-sized node fleet from m5.xlarge to m5.large, cutting infrastructure costs by **50%+**.
- Configured **Kafka** for event streaming with monitoring dashboards tracking lag and throughput.
- Implemented **Redis caching** and connection pooling, achieving **sub-100ms** response times under sustained load.

Pedgog — Platform Infrastructure Next.js, Django, Kubernetes, Terraform, Jenkins, New Relic, K6

- Implemented **New Relic APM** with dual dashboards — technical metrics for engineering, visual health indicators for non-technical stakeholders — eliminating cross-team communication overhead.
- Performed **K6 testing** to validate autoscaling thresholds; documented **runbooks and incident response procedures** for on-call.

Education

Master of Science in Software Engineering Systems — *Northeastern University, Boston, MA* Sept 2023 – May 2025

Bachelor of Engineering in Computer Engineering — *University of Mumbai, Mumbai, India* Aug 2018 – Jun 2021
