## Summary

Software Engineer with 3+ years building and operating cloud-native infrastructure on AWS and GCP. Owned Terraform-managed Kubernetes clusters, Jenkins JCasC pipelines, and Prometheus/Grafana observability across multiple production environments, reducing MTTR from 25 to 15 minutes, cutting deploy time from 2 hr to 25 min, and deferring 30K in infra spend through right-sizing.

## Skills

|                |                                                                                                          |
|----------------|----------------------------------------------------------------------------------------------------------|
| Languages      | Python, Bash, PowerShell, Go, Groovy, JavaScript, TypeScript, Java, SQL                                  |
| Cloud & Infra  | AWS (EKS, EC2, S3, RDS, IAM, CloudWatch, ELB), GCP (GKE, Cloud SQL, Pub/Sub), Terraform, Ansible, Packer |
| Containers     | Docker, Kubernetes (EKS/GKE), Helm, Istio, HPA, Cluster Autoscaler                                       |
| CI/CD          | Jenkins (JCasC, Groovy), GitHub Actions, GitLab CI, Blue-Green/Canary Deploys, Git                       |
| Observability  | Prometheus, Grafana, New Relic, OpenTelemetry, CloudWatch, SLOs/SLIs, Incident Response, K6 Load Testing |
| Backend & Data | Node.js, Python (FastAPI), Java, Spring Boot, REST, gRPC, Kafka, PostgreSQL, Redis                       |

## Professional Experience

Full-Stack Developer, KeelWorks Foundation — Remote

Aug 2025 – Present

- Own infrastructure for **KeelCompass** workforce engagement platform: **AWS EKS** cluster provisioned via **Terraform**, containerized services on Docker, and **GitHub Actions** CI/CD with automated rollback on failed health checks.
- Built **Prometheus/Grafana** dashboards tracking API latency, error rates, and pod health across environments; configured alerting for production incidents.
- Established coding standards and reusable React/Node.js component patterns adopted across the team, reducing onboarding time for new contributors.

Software Engineer, Freelance (Dabadu.ai) — Remote

May 2023 – Sept 2023

- Debugged flaky production issues across an AWS-hosted automotive dealership CRM; added structured logging that cut triage time in half and wrote runbooks for common incidents (API timeouts, DB connection leaks) used by the on-call rotation.
- Integrated **SonarCloud** security scanning and **Cypress** E2E testing into the CI pipeline; enforced quality gates that reduced post-deploy bugs 20%.

Software Engineer, NeoSOFT Technologies — Mumbai, India

Jun 2021 – May 2023

- Selected for the **Center of Excellence** (top 5 performers) building org-wide tooling; shipped open-source boilerplates including **mf-shell** (Module Federation) and **Console** (multi-tenant admin panel with RBAC and SSO) adopted across 15+ internal teams.
- Led infrastructure migration of a 500K+ user real estate CRM from monolith to multi-tenant Kubernetes platform; designed **Terraform** modules and **Helm** charts, right-sized EKS node fleet cutting infra cost **45%+**.
- Right-sized EKS clusters using **New Relic** capacity metrics, deferring **30K** in hardware spend by identifying over-provisioned pods; configured **HPA** and cluster autoscaler that handled 3x traffic spikes during product launches without manual intervention.
- Automated operational tasks with Python, Bash, and PowerShell across 50+ hosts (log rotation, backups, health checks), **reducing on-call pages 40%**; ran weekly **K6** load tests in staging, catching 3 race conditions before they reached production.
- Migrated manual releases to **Jenkins** pipelines with blue-green rollouts and **JCasC**/Groovy configuration; cut deploy time from **2 hours to 25 minutes** and enabled multiple daily releases for same-day bug fixes.
- Set up **Prometheus/Grafana** dashboards with SLO/SLI tracking for API latency and error rates plus **New Relic APM** dual dashboards (engineering metrics + stakeholder health view), cutting MTTR from **25 to 15 minutes**.
- Configured **AWS Secrets Manager** and least-privilege **IAM** roles; passed security audit with zero critical findings; led blameless postmortems documenting root causes and disaster recovery procedures across the engineering org.

## Projects

CVE Intelligence System — Cloud-Native Infrastructure

Go, Terraform, AWS EKS, Kubernetes, Helm, Istio, Jenkins, Prometheus

- Deployed distributed microservices on **AWS EKS** using **Terraform** IaC and **Helm** charts; configured **Istio** service mesh for secure inter-service communication with **mTLS** encryption.
- Bootstrapped reproducible CI environments with **Packer** and **Jenkins JCasC**; implemented **Prometheus/Grafana** for real-time observability with SLO dashboards and automated alerting. Built ingestion pipeline on **Kafka** with a RAG retrieval layer over Pinecone + Llama 3 enabling natural-language queries.

Pedgog — Platform Infrastructure

Kubernetes, Terraform, Jenkins, New Relic, K6

- Deployed high-volume analytics platform on **Kubernetes** with **Terraform**-managed infrastructure and **Jenkins** CI/CD pipelines; performed **K6** load testing to validate auto-scaling thresholds and inform capacity planning decisions.
- Implemented **New Relic APM** dual dashboards (engineering metrics + non-technical stakeholder health view) eliminating cross-team status-check overhead; documented runbooks and incident response procedures for on-call rotation.

## Education & Certifications

Master of Science in Software Engineering Systems — Northeastern University, Boston, MA

Sept 2023 – May 2025

Relevant Coursework: Advanced Cloud Computing, Distributed Systems, Operating Systems, Algorithms

Bachelor of Engineering in Computer Engineering — University of Mumbai, Mumbai, India

Aug 2018 – Jun 2021

Certifications: Oracle Certified Java Enterprise Applications Developer | Scrum Fundamentals (SCRUMStudy)
