

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3+ years owning full-stack features end-to-end across React/TypeScript, Node.js, Python and PostgreSQL. Led a 12-service microservices rebuild coordinating 20+ engineers with 45%+ infra cost reduction; shipped AI systems with audit trails, confidence scoring, and traceable decisions. Drawn to problems at the boundary of software and physical systems, where careful engineering changes what happens downstream.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Go, SQL, C++, Shell

Frontend: React, Next.js, Redux, Material-UI, Tailwind, HTML, CSS, Storybook, Jest, Cypress, React Testing Library

Backend & APIs: Node.js, Express, FastAPI, Django, Spring Boot, REST, GraphQL, gRPC, WebSockets

AI & Data: Claude, RAG, MCP, Pinecone, Llama 3, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud: AWS, GCP, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Prometheus, Grafana, New Relic, K6

EXPERIENCE

Full-Stack Developer

Aug 2025 – Present

KeelWorks Foundation

Boston, MA

- Own end-to-end development of KeelCompass, an internal workforce engagement platform; deliver React/TypeScript and Node.js services backed by PostgreSQL, partnering with PM and design to ship features for a distributed team
- Built reusable React component library and coding standards adopted across the team, cutting repeated patterns and reducing onboarding; established Jest and React Testing Library unit/integration coverage as merge requirement
- Automated end-to-end deployment pipeline with GitHub Actions on AWS EKS, eliminating manual release steps and unblocking same-day deploys for the engineering team

Software Engineer

Jun. 2021 – May 2023

NeoSOFT Technologies

Mumbai, India

- Architected full-stack apps with React frontends and Node.js services across real estate, retail, and edtech CRMs serving 500K+ users; designed REST and GraphQL APIs with Redis caching, cutting response times 70%
- Established Jest and Cypress test automation reaching 85% coverage with mandatory unit and integration tests as merge requirement; added Prometheus/Grafana and New Relic observability cutting MTTR from 25 to 15 minutes
- Audited 500K+ user real estate CRM (400–500ms avg, 2s spikes); designed full architecture, flow diagrams, and service migration plan; built pre-configured gRPC/Kafka microservices boilerplate; coordinated 20+ engineers over 6 months – 12 services migrated, 7x faster inter-service calls, 45%+ infra cost reduction via AWS rightsizing
- Engineered Homepage Builder CMS and multi-tenant CRM for Nesto using React, Node.js, and AWS Lambda; enabled marketing to independently update pages and promotions, eliminating a recurring engineering bottleneck
- Built Django analytics engine aggregating per-student classroom data, visualized on Next.js dashboard – enabled teachers to monitor live attendance, quiz scores, and engagement during class
- Built open-source boilerplates – mf-shell (Webpack Module Federation for micro-frontend composition) and Console (multi-tenant admin panel with RBAC); adopted as org-wide scaffolding standards by 15+ internal teams
- Mentored 8 junior developers through code reviews and initiated bi-weekly knowledge sharing seminars

Software Engineer

May 2023 – Sep. 2023

Freelancing (Dabadu.ai)

Remote

- Resolved prod defects across CRM; diagnosed stability issues across modules, restoring live dealership operations
- Refactored legacy JS to TypeScript and introduced SonarCloud quality gates in CI, reducing production bugs 20%

RECENT PROJECTS

Healthcare Prior Authorization AI | *Python, FastAPI, Claude API, FHIR R4, MCP, Pinecone, Streamlit*

- Engineered AI system replacing 3-5 day manual insurance reviews with automated decisions in 10 sec; built clinical NLP pipeline mapping unstructured medical notes to FHIR resources with 95% extraction accuracy on test dataset
- Designed system with full audit trails, citation traceability, and confidence scoring on every decision – the engineering discipline required when software outputs influence high-stakes downstream actions

Smart Parking System | *Flutter, Python, Raspberry Pi, Computer Vision, Firebase*

- Built mobile app connected to Raspberry Pi edge devices with camera modules detecting parking occupancy; Python server processed sensor data and streamed real-time status to the app

CVE Intelligence System | *Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio*

- Built distributed microservices for real-time CVE ingestion using Kafka streaming with schema validation; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in plain English
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline
