

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3+ years building production full-stack platforms and AI-powered clinical workflows. Engineered a FHIR prior authorization system (Claude, MCP, RAG) replacing manual reviews with 5-sec decisions at 95% accuracy. Strong React, Next.js, Node and Django foundation; comfortable to work across frontend, backend, and infrastructure.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

University of Mumbai

Bachelor of Engineering in Computer Engineering

Mumbai, India

Aug 2018 – Jun 2021

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, Redux, Multi-step Forms, Workflow UIs, Storybook

AI & LLM: Claude, MCP, RAG, Agentic Workflows, FHIR, Clinical NLP, Pinecone, Llama 3

Backend: Python (Django, FastAPI), Node.js, PostgreSQL, REST, GraphQL, gRPC, WebSockets

Cloud & DevOps: AWS (EKS, Lambda, S3), Kubernetes, Docker, Terraform, GitHub Actions, Jenkins

Observability & Testing: Prometheus, Grafana, New Relic, Jest, Cypress, React Testing Library, K6

EXPERIENCE

Full-Stack Developer

Aug 2025 – Present

KeelWorks Foundation

Boston, MA

- Own end-to-end development of KeelCompass workforce engagement platform; ship React/Next.js/TypeScript interfaces backed by Node.js services and PostgreSQL, partnering directly with PM and design
- Built multi-step workflow UIs and reusable component library with Storybook; established frontend coding standards adopted across distributed team, reducing onboarding time for new contributors
- Built Claude powered content automation generating newsletters and blog posts from drafts directly to published webpages; used Claude Code to accelerate test case generation while maintaining code ownership through reviews
- Deployed containerized services on AWS EKS with Docker and Terraform; automated CI/CD pipeline with GitHub Actions, eliminating manual release steps and unblocking same-day deploys

Software Engineer

Jun. 2021 – May 2023

NeoSOFT Technologies

Mumbai, India

- Engineered Nesto Homepage Builder CMS with React and Node; drag-and-drop multi-step form flows enabling marketing teams to publish content independently, eliminating bottleneck across dozens of Middle East stores
- Architected Django analytics backend for Pedgog ed-tech platform; served async APIs to a Next.js dashboard for real-time instructor visibility into attendance, quiz scores, and engagement during live class sessions
- Designed dual New Relic dashboards (engineering metrics + non-technical stakeholder health view) after owning a production incident; cut MTTR from 25 to 15 minutes and eliminated cross-team status interruptions
- Audited real estate CRM; proposed and led ground-up rebuild, coordinating 20+ engineers over 6 months – migrated 12 services with zero downtime, 7x faster inter-service calls via gRPC, 45%+ infra cost reduction
- Built open-source boilerplates – mf-shell (Webpack Module Federation for micro-frontend composition) and Console (multi-tenant admin panel with RBAC); adopted as org-wide scaffolding standards by 15+ internal teams

Software Engineer

May 2023 – Sep. 2023

Freelancing (Dabadu.ai)

Remote

- Resolved production defects across Dabadu's automotive CRM; restored deployment reliability across multiple modules for live dealership operations
- Refactored legacy JS to TypeScript and introduced SonarCloud quality gates, reducing production bugs by 20%

RECENT PROJECTS

Healthcare Prior Authorization AI | Python, FastAPI, Next.js, Claude API, MCP, FHIR R4, Pinecone, PostgreSQL

- Engineered AI system replacing 3-5 day manual prior authorization reviews with automated decisions in 5-10 sec; built clinical NLP pipeline mapping unstructured medical note to FHIR resources with 95% accuracy on test dataset
- Designed MCP architecture for context-aware LLM reasoning combining patient clinical data with insurance policy documents; system outputs confidence scores with full audit trails enabling reviewers to prioritize high-value claims
- Built multi-step clinician review interface surfacing extracted CPT codes, medications, diagnoses, and contraindications; designed for trust and traceability with citation-level evidence linking AI decisions back to source

CVE Intelligence System | Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio

- Built distributed microservices for real-time CVE ingestion with Kafka streaming; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in plain English instead of manual NVD searches
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline
