Hiring Team
PowerMarket
New York, NY

Dear Hiring Team,

I'm applying for the Full Stack Software Engineer role at PowerMarket. The intersection of clean energy access and engineering is a genuinely compelling space to work in, and the scale at which PowerMarket operates — serving solar developers, utilities, and municipalities — makes the technical problems here meaningful in a way that keeps me interested.

On the technical side, I bring the full-stack depth this role calls for. I've built production web applications end-to-end using Java and Spring Boot on the backend alongside React and Node.js on the front end, with REST APIs, JSON/Ajax-driven integrations, PostgreSQL, and JavaScript/HTML/CSS throughout. At NeoSOFT Technologies, I led a ground-up microservices migration involving 20+ engineers and 12 services, designed GraphQL and REST APIs serving 500K+ users, and cut API response times 70% through PostgreSQL query optimization and Redis caching. I also built a multi-tenant CRM and CMS from scratch, taking projects from requirements through deployment.

Beyond the implementation work, I've dealt with the third-party integration complexity that comes with production systems — working with AWS services, CI/CD pipelines, and APM tooling — which I expect maps well to PowerMarket's Stripe, DocuSign, and AWS stack. I'm comfortable on Linux, in IntelliJ, and working with version control at team scale.

I work best in environments where engineering decisions have visible product impact, and a team that ships features against real customer and mission outcomes is exactly where I want to be. I'd welcome the chance to talk through how my background fits what you're building.

Thank you for your time.

Sincerely,
Mihir Ravindra Adelkar
