

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3+ years building full-stack systems in TypeScript, React, Node.js, Python, and C++. Built component libraries and platform tooling adopted across 15+ engineering teams; shipped Next.js dashboards and B2B systems serving 750K+ users. Integrated GenAI workflows (Claude, MCP, RAG) into production. Drawn to engineering problems where domain understanding matters as much as the code.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

University of Mumbai

Bachelor of Engineering in Computer Engineering

Mumbai, India

Aug 2018 – Jun 2021

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, Go, HTML, CSS, SQL

Frameworks & UI: React, Next.js, Redux, Material UI, Node.js, Spring Boot, FastAPI, GraphQL, REST APIs

Data & AI: PostgreSQL, MongoDB, Redis, MySQL, Elasticsearch, Claude API, MCP, RAG, Pinecone, Llama 3, Ollama

Cloud & Infra: AWS, GCP, EKS, S3, Docker, Kubernetes, Terraform, Helm, Jenkins, GitHub Actions

Testing & Performance: Jest, Cypress, React Testing Library, K6, Core Web Vitals, Lighthouse, Prometheus, Grafana

EXPERIENCE

Full-Stack Developer

Aug 2025 – Present

KeelWorks Foundation

Remote

- Own end-to-end development an internal engagement platform serving 8K+ active users; built React + TypeScript UI with Redux and Node.js microservices on PostgreSQL, partnering with product and design to ship features fast
- Designed and published React component library with Storybook, establishing coding standards across a distributed team of 12+ engineers; cut feature development time 30% and reduced duplicated patterns across products
- Architected backend integration service connecting Claude API to internal workflows for contextual recommendations and automated summarization, reducing administrative effort 40% and accelerating task completion 25%
- Optimized Core Web Vitals via code splitting and bundle tuning, improving page load time 45% and increasing user engagement 18%; deployed services on AWS EKS using Docker and Terraform with GitHub Actions CI/CD

Software Engineer

May 2023 – Sep. 2023

Freelancing (Dabadu.ai)

Remote

- Refactored legacy JavaScript to TypeScript across an automotive dealership CRM; introduced SonarCloud quality gates that reduced production bugs 20%
- Diagnosed and resolved production defects across TypeScript, C++, and Python services, restoring deployment reliability for live dealership operations

Software Engineer

Jun 2021 – May 2023

NeoSOFT Technologies

Mumbai, India

- Built and open-sourced platform engineering tooling: mf-shell (Webpack Module Federation for micro-frontend) and Console (multi-tenant admin panel with RBAC); adopted as org-wide scaffolding standards by 15+ internal teams
- Designed React multi-tenant B2B CRM and Homepage Builder CMS for Nesto in Node.js and AWS Lambda, supporting in-house brands and vendor partners; enabled marketing teams to independently update pages
- Designed GraphQL/REST APIs with PostgreSQL and Redis caching serving 750K+ users; cut API response times 70% under peak traffic; established Jest/Cypress automation reaching 85% test coverage
- Built Django analytics engine and Next.js dashboard visualizing per-student attendance, quiz scores, and engagement; enabled teachers to monitor live classroom data with post-session reports
- Built authentication and authorization sidecar in C++ deployed across 12 microservices, centralizing identity and policy enforcement and eliminating per-service auth duplication

PROJECTS

Healthcare Prior Authorization AI System | *Python, FastAPI, Claude API, MCP, FHIR R4, Pinecone, Streamlit, GCP*

- Engineered AI data pipeline transforming 3 day manual insurance reviews into automated 10 sec decisions; built clinical NLP pipeline in Python with FastAPI mapping unstructured notes to FHIR resources with 95%+ accuracy
- Designed MCP architecture for context-aware LLM reasoning combining patient data with insurance policy documents; system outputs confidence scores with full audit trails for reviewer prioritization

CVE Intelligence System | *Go, Python, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio*

- Built distributed microservices for real-time CVE ingestion using Kafka streaming; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in natural language instead of NVD searches
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline
