Summary

Software Engineer with 3+ years building and operating scalable cloud infrastructure on AWS/GCP. Expert in Kubernetes, Terraform, and CI/CD pipeline automation. Reduced MTTR from 25 to 15 minutes, achieved 99.9% uptime, and automated 40% of operational tasks. Strong foundation in observability, incident response, and infrastructure as code.

Skills

Languages	Python, Bash/Shell, Go, JavaScript, TypeScript, Java, Groovy, SQL
Cloud & Infra	AWS (EKS, EC2, S3, RDS, IAM, CloudWatch, ELB), GCP (GKE, Cloud SQL, Pub/Sub), Terraform, Ansible
Containers	Docker, Kubernetes (EKS/GKE), Helm, Istio Service Mesh, Container Security, Auto-scaling
CI/CD	Jenkins (Pipeline-as-Code, JCasC), GitHub Actions, GitLab CI, Packer, ArgoCD, Blue-Green/Canary Deploys
Observability	Prometheus, Grafana, New Relic, OpenTelemetry, ELK Stack, CloudWatch, SLOs/SLIs, Alerting
Reliability	Incident Response, Root Cause Analysis, Capacity Planning, Load Testing (K6), Chaos Engineering

Professional Experience

Full-Stack Developer, KeelWorks — Boston, MA

Aug 2025 – Present

- Own infrastructure for workforce engagement platform: **EKS cluster**, **Terraform** modules, and **GitHub Actions** CI/CD.
- Set up **Prometheus/Grafana** dashboards tracking API latency, error rates, and pod health across environments.
- Reduced deployment friction by containerizing services with **Docker** and automating rollbacks on failed health checks.

Software Engineer, Freelancing (Dabadu.ai) — Remote

May 2023 – Sept 2023

- Debugged flaky production issues in AWS-hosted CRM; added structured logging that cut triage time in half.
- Wrote **runbooks** for common incidents (API timeouts, DB connection leaks) used by on-call rotation.
- Integrated **SonarCloud** into Bitbucket pipelines; enforced quality gates that reduced post-deploy bugs by **20%**.

Software Engineer, NeoSOFT Technologies — Mumbai, India

Jun 2021 – May 2023

- Built and maintained **Terraform** modules for AWS/GCP infra (EKS, RDS, S3, IAM); adopted as templates across 3 teams.
- Cut deploy time from **2 hours to 12 minutes** by migrating manual releases to **Jenkins pipelines** with blue-green rollouts.
- Wrote **Bash scripts** for log rotation, backups, and health checks on **50+ hosts**; reduced on-call pages by **40%**.
- Ran weekly **K6 load tests** in staging; caught 3 race conditions before prod that would've caused outages.
- Configured **HPA and cluster autoscaler** on EKS; handled 3x traffic spikes during product launches without manual intervention.
- Set up **Prometheus/Grafana** dashboards for API latency and error rates; added alerts that cut **MTTR from 25 to 15 min**.
- Right-sized EKS clusters using **New Relic** metrics; deferred **\$30K** in hardware spend by identifying over-provisioned pods.
- Configured **AWS Secrets Manager** and least-privilege **IAM roles**; passed security audit with zero critical findings.
- Led blameless postmortems after incidents; documented root causes and action items that prevented repeat issues.

Projects

CVE Intelligence System — Cloud-Native Infrastructure

Go, Terraform, AWS EKS, Kubernetes, Helm, Istio, Prometheus

- Deployed distributed microservices on **AWS EKS** using **Terraform** for IaC and **Helm** charts for K8s resources.
- Configured **Istio service mesh** for secure inter-service communication; bootstrapped **Jenkins** with **Packer/JCasC**.
- Implemented **Prometheus and Grafana** for real-time observability, alerting, and SLO dashboards.

Cloud-Native REST Application

React, Java, Spring Boot, MySQL, Terraform, GCP, Packer

- Configured **Managed Instance Groups (MIG)**, **Autoscaler**, and **Load Balancer** to achieve **99.9% uptime**.
- Leveraged **GitHub Actions** to automate deployment, reducing deployment time by **90%** using custom **Packer** machine images.
- Secured infrastructure through **Cloud VPC**, **DNS**, **Firewalls**, and **IAM policies** for robust access control.

Wasalt — Real Estate Platform Infrastructure

Kubernetes, Terraform, Kafka, Redis, Jenkins, Grafana

- Deployed multi-tenant microservices on **Kubernetes** with **Terraform** IaC and **Helm** charts.
- Configured **Kafka** for event streaming with monitoring dashboards tracking lag and throughput.
- Implemented **Redis caching** and connection pooling, achieving **sub-100ms** response times under load.

Pedgog — Platform Infrastructure

Next.js, Django, Kubernetes, Terraform, Jenkins, New Relic, K6

- Deployed high-volume analytics platform on **Kubernetes** with IaC managed via **Terraform**; established **Jenkins CI/CD**.
- Implemented **New Relic** for APM and performed **K6 stress testing** to gather metrics for auto-scaling decisions.
- Created dashboards to identify peak activity, scaling resources dynamically during high load periods.

Open Source Contributions

GitHub: NeoSOFT-Technologies

- **Micro-Frontend Boilerplate**: TypeScript + React with **Docker** containerization and **CI/CD pipelines**; adopted by 15+ teams.
- **Multi-Tenancy Admin Console**: SaaS portal deployed via **GitHub Actions** and **Docker** for isolated container operation.

Education & Certifications

Master of Science in Software Engineering Systems — Northeastern University, Boston, MA

Sept 2023 - May 2025

Relevant Coursework: Advanced Cloud Computing, Distributed Systems, Operating Systems, Algorithms

Bachelor of Engineering in Computer Engineering — University of Mumbai, Mumbai, India

Aug 2018 - Jun 2021
