Summary

Software Engineer with 3+ years building and operating cloud-native infrastructure on AWS. Hands-on experience with Terraform IaC, Kubernetes (EKS), Ubuntu/Linux systems, and AWS networking (VPC, subnets, security groups, IAM). Built reusable Terraform modules adopted across 3 engineering teams, deferred \$30K in infrastructure spend through EKS rightsizing, and cut MTTR from 25 to 15 minutes through proactive observability.

Skills

Languages	Python, Bash/Shell, Go, JavaScript, TypeScript, Java, Groovy, SQL
Cloud & Infra	AWS (EKS, S3, RDS, IAM, ALB/NLB), GCP, Terraform, Ansible; Ubuntu/Linux, VPC, DNS
Containers	Docker, Kubernetes (EKS/GKE), Helm, Istio Service Mesh, Container Security, Auto-scaling
CI/CD	Jenkins (Pipeline-as-Code, JCasC), GitHub Actions, GitLab CI, Packer, ArgoCD, Blue-Green/Canary Deploys
Observability	Prometheus, Grafana, New Relic, OpenTelemetry, ELK Stack, CloudWatch, SLOs/SLIs, Alerting
Reliability	Incident Response, Root Cause Analysis, Capacity Planning, Load Testing (K6), Chaos Engineering

Professional Experience

Full-Stack Developer, KeelWorks — Boston, MA Aug 2025 – Present

- Own infrastructure for workforce engagement platform: **EKS cluster**, **Terraform** modules, and **GitHub Actions** CI/CD; reduced deployment time by **60%** and release failures by **40%**.
- Set up **Prometheus/Grafana** dashboards tracking API latency, error rates, and pod health; containerized services with **Docker** and automated rollbacks on failed health checks.

Software Engineer, Freelancing (Dabadu.ai) — Remote May 2023 – Sept 2023

- Debugged flaky production issues in AWS-hosted CRM; added structured logging and wrote **runbooks** for common incidents (API timeouts, DB connection leaks) used by on-call rotation.
- Integrated **SonarCloud** into Bitbucket pipelines; enforced quality gates that reduced post-deploy bugs by **20%**.

Software Engineer, NeoSOFT Technologies — Mumbai, India Jun 2021 – May 2023

- Authored reusable **Terraform** modules for **EKS**, RDS, S3, and IAM — adopted as org-wide provisioning standards across **3 teams**; managed remote state via S3 backends with workspace-based environment separation.
- Cut deploy time from **2 hours to 12 minutes** by migrating manual releases to **Jenkins pipelines** with blue-green rollouts.
- Administered **Ubuntu-based hosts**; wrote **Bash scripts** for log rotation, backups, and health checks across **50+ nodes** — reduced on-call pages by **40%**.
- Configured **VPC networking**, security groups, and least-privilege **IAM roles** for EKS workloads; passed security audit with zero critical findings.
- Configured **HPA and cluster autoscaler** on EKS; handled 3x traffic spikes without manual intervention. Ran weekly **K6 load tests** in staging; caught 3 race conditions before production.
- Set up **Prometheus/Grafana** dashboards for API latency and error rates; added alerts that cut **MTTR from 25 to 15 min**.
- Led blameless postmortems after incidents; documented root causes and action items that prevented repeat issues.
- Right-sized EKS node groups using **New Relic** metrics — downgraded m5.xlarge fleet to m5.large, deferring **\$30K** in infrastructure spend.

Projects

CVE Intelligence System — Cloud-Native Infrastructure Go, Terraform, AWS EKS, Kubernetes, Helm, Istio, Prometheus

- Deployed distributed microservices on **AWS EKS** using **Terraform** for IaC and **Helm** charts for K8s resources.
- Configured **VPC subnets**, security groups, and **ALB** ingress for EKS cluster; implemented **network policies** and mTLS encryption via **Istio** service mesh.
- Bootstrapped **Jenkins** with **Packer/JCasC**; implemented **Prometheus and Grafana** for real-time observability, alerting, and SLO dashboards.

Wasalt — Real Estate Platform Infrastructure Kubernetes, Terraform, Kafka, Redis, Jenkins, Grafana

- Coordinated phased migration across **20+ engineers**; deployed **12 microservices** on **Kubernetes** with **Terraform** IaC and **Helm** charts — zero production downtime over 6 months.
- Right-sized AWS infrastructure from m5.xlarge to m5.large; achieved **50%+ infra cost reduction** and **sub-100ms** response times via **Redis caching** and Kafka event streaming.

Open Source Contributions GitHub: NeoSOFT-Technologies

- Micro-Frontend Boilerplate** (TypeScript + React + Docker + CI/CD) and **Multi-Tenancy Admin Console** (RBAC, Keycloak SSO, GitHub Actions) — adopted by **15+ teams** as org-wide scaffolding standards.

Education & Certifications

Master of Science in Software Engineering Systems — Northeastern University, Boston, MA Sept 2023 - May 2025

Relevant Coursework: Advanced Cloud Computing, Distributed Systems, Operating Systems, Algorithms

Bachelor of Engineering in Computer Engineering — University of Mumbai, Mumbai, India Aug 2018 - Jun 2021

Certifications: Oracle Certified Java Enterprise Applications Developer | Scrum Fundamentals Certified (SCRUMStudy)
