

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Full-Stack Engineer with 3 years shipping data-analysis-driven web platforms with React/TypeScript + Redux and Python (Flask, Django). Built analytics dashboards for non-engineering users and PostgreSQL/Redis APIs serving 500K+ users with 70% latency reduction. Strong fundamentals in modern JavaScript (ES6+) and scaling web applications.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

University of Mumbai

Bachelor of Engineering in Computer Engineering

Mumbai, India

Aug 2018 – Jun 2021

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Redux (Toolkit/Saga), Sass, Next.js, Material-UI, Tailwind, Webpack

Backend: Python, Flask, Django, Node.js, Express, Java, Spring Boot, REST APIs, GraphQL, gRPC

Databases: PostgreSQL (query optimization, indexing, schema design), MySQL, MongoDB, Redis, Elasticsearch

Cloud & Infra: AWS (EKS, Lambda, S3, RDS), GCP, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins

Testing & Observability: Jest, Cypress, React Testing Library, Pytest, Prometheus, Grafana, New Relic, K6

EXPERIENCE

Full-Stack Developer

KeelWorks Foundation

Aug 2025 – Present

Boston, MA

- Own end-to-end development of KeelCompass, a workforce engagement platform; ship React/TypeScript + Redux UI and Node.js + PostgreSQL microservices, partnering with PM and design from mockup through deployment
- Designed and published reusable UI component library with Storybook, establishing coding standards across a distributed team and cutting feature development time
- Automated deployment pipeline with GitHub Actions on AWS EKS, eliminating manual release steps and unblocking same-day deploys; configured Prometheus/Grafana dashboards tracking API latency and error rates

Software Engineer

Freelancing (Dabadu.ai)

May 2023 – Sep. 2023

Remote

- Built full-stack features for production automotive dealership CRM with React/TypeScript and Node.js; designed and optimized GraphQL endpoints with pagination, reducing data overfetching by 40%
- Refactored legacy JavaScript to TypeScript and introduced SonarCloud quality gates plus Cypress E2E tests in CI/CD, reducing production regressions by 20%

Software Engineer

NeoSOFT Technologies

Jun. 2021 – May 2023

Mumbai, India

- Architected Django analytics engine aggregating per-student classroom data, visualized on Next.js dashboard — enabled teachers (non-engineering users) to explore live attendance, quiz scores, and engagement during class, with post-session reports drilled down by cohort
- Designed GraphQL/REST APIs with PostgreSQL and Redis serving 500K+ users; tuned indexes and query plans, cutting response times 70% under peak traffic; established Jest/Cypress automation reaching 85% test coverage
- Built reusable React/TypeScript component libraries published as npm packages adopted by 15+ teams, including *mf-shell* (Webpack Module Federation for micro-frontend) and *Console* (multi-tenant admin panel with RBAC)
- Audited real estate CRM (400–500ms avg latency); designed full architecture and migration plan, coordinating 20+ engineers over 6 months — 12 services migrated, 7x faster inter-service calls, 45%+ infra cost reduction
- Engineered Homepage Builder CMS with React + Node.js + AWS Lambda; enabled marketing to independently update pages and promotions, eliminating a recurring engineering bottleneck
- Mentored 8 junior developers through code reviews and initiated bi-weekly knowledge-sharing seminars

RECENT PROJECTS

Healthcare Prior Authorization AI | Python, FastAPI, Claude API, FHIR R4, MCP, Pinecone, Streamlit

- Engineered AI system replacing 3–5 day manual insurance reviews with automated decisions in 5–10 sec; built clinical NLP pipeline mapping unstructured notes to FHIR R4 resources with 95%+ extraction accuracy on test dataset
- Designed MCP architecture for context-aware LLM reasoning combining patient data with insurance policy documents; system outputs confidence scores with full audit trails enabling reviewers to prioritize high-value claims

CVE Intelligence System | Go, Node.js, Kafka, Pinecone, Llama 3, AWS EKS, Terraform, Istio

- Built distributed microservices for real-time CVE ingestion using Kafka streaming; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in plain English instead of manual NVD searches
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline
