

MIHIR RAVINDRA ADELKAR

617-487-2363 | adelkar.mihir@gmail.com | linkedin.com/in/mihir-adelkar | github.com/mihiradelkar

Software Engineer with 3+ years building low-latency backend services and partner-facing APIs at scale. Led a 12-service microservices migration - 7x faster inter-service calls, 45% infra cost reduction. Built multi-tenant B2B systems serving 750K users with Python, Java, C++, gRPC, Kafka. Drawn to systems where every architectural decision affects scale.

EDUCATION

Northeastern University

Master of Science in Software Engineering Systems

Boston, MA

Sept 2023 – May 2025

University of Mumbai

Bachelor of Engineering in Computer Engineering

Mumbai, India

Aug 2018 – Jun 2021

TECHNICAL SKILLS

Languages: Java, Python, C++, Go, TypeScript, JavaScript, SQL, Shell Scripting

Frameworks: Spring Boot, Node.js, FastAPI, Django, gRPC, GraphQL, REST APIs, React, Next.js

Data & Messaging: Kafka, Redis, PostgreSQL, MongoDB, MySQL, Elasticsearch, Pinecone

Cloud & Infra: AWS, GCP, EKS, S3, Docker, Kubernetes, Terraform, Helm, Jenkins, GitHub Actions, Ollama, Llama 3

AI & Tools: Claude, MCP, RAG, Prometheus, Grafana, New Relic, Jest, Cypress, K6

EXPERIENCE

Full-Stack Developer

Aug 2025 – Present

KeelWorks Foundation

Remote

- Built backend services in **Node.js** and **PostgreSQL** for KeelCompass, a workforce engagement platform serving 8K+ active users; designed **REST APIs** and async processing patterns supporting a distributed engineering team
- Architected backend integration service connecting Claude API to internal workflows for contextual recommendations and automated summarization, reducing administrative effort 40% and accelerating task completion 25%
- Automated end-to-end deployment pipeline with **GitHub Actions** on **AWS EKS** using **Docker** and **Terraform**; eliminated manual release steps and unblocked same-day deploys, cutting release failures 40%

Software Engineer

May 2023 – Sep. 2023

Freelancing (Dabadu.ai)

Remote

- Resolved production defects across **TypeScript**, **C++**, and **Python** services in an automotive dealership CRM, restoring deployment reliability for live dealership operations
- Refactored legacy JavaScript to TypeScript and introduced SonarCloud quality gates, reducing production bugs 20%

Software Engineer

Jun 2021 – May 2023

NeoSOFT Technologies

Mumbai, India

- Audited 750K+ user real estate CRM (400–500ms avg latency); designed full architecture and service migration plan
- Built **gRPC** + **Kafka** + **Redis** microservices boilerplate and coordinated 20+ engineers over 6 months, migrated 12 services with 7x faster inter-service calls and 45%+ infrastructure cost reduction via AWS rightsizing
- Built authorization core package in **C++** as sidecar deployed across the migrated microservices, centralizing identity and policy enforcement and eliminating per-service auth duplication
- Designed GraphQL/REST APIs with **PostgreSQL** and **Redis** caching serving 750K+ users; cut API response times 70% under peak traffic; established Jest/Cypress automation reaching 85% test coverage
- Built multi-tenant B2B CRM and Homepage Builder CMS for Nesto in **Node.js** and **AWS Lambda**, supporting in-house brands and vendor partners; enabled marketing teams to independently update pages and promotions, eliminating a recurring engineering bottleneck
- Built and open-sourced platform engineering tooling — Console (multi-tenant admin panel with RBAC) and mf-shell (micro-frontend composition) — adopted as org-wide scaffolding standards by 15+ internal engineering teams
- Built CI/CD pipelines with mandatory tests and **New Relic** APM dual dashboards (engineering + stakeholder views), cutting MTTR from 25 to 15 minutes

PROJECTS

CVE Intelligence System | *Go, Kafka, Istio, AWS EKS, Terraform, Pinecone, Llama 3, Node.js*

- Built distributed microservices in Go for real-time CVE ingestion using Kafka streaming; developed RAG pipeline with Pinecone and Llama 3 enabling engineers to query vulnerabilities in natural language instead of NVD searches
- Deployed on AWS EKS with Terraform IaC and Istio service mesh; implemented Prometheus/Grafana monitoring with automated alerting and Jenkins CI/CD pipeline

Healthcare Prior Authorization AI System | *Python, FastAPI, Claude API, MCP, FHIR R4, Pinecone, Streamlit, GCP*

- Engineered AI system replacing 3–5 day manual insurance reviews with automated 5–10 second decisions; built FastAPI clinical NLP pipeline mapping unstructured notes to FHIR R4 resources with 95%+ extraction accuracy
- Designed MCP architecture for context-aware LLM reasoning combining patient data with insurance policy documents; system outputs confidence scores with full audit trails for reviewer prioritization
